*“DeVry has molded my career because it taught me how to think effectively, how to be independent.”*

When I looked around at all the accomplishments in my life, the only thing that remained unchecked was my degree," says Ennis Alvarez, a 2008 graduate of DeVry University. That realization is what convinced me to go to DeVry."

"DeVry has molded my career because it taught me how to think effectively, how to be independent and how to tackle so many aspects of life."

Alvarez always had an interest in electronics, but it was after attending DeVry and starting his career that he recognized that computers held a special interest for him. His hectic business travel schedule at the time necessitated finding a degree program that allowed him to earn his degree completely on-line.

He says, "The professors, online as well as on campus, provide a lot of access to students. It's very rare in a conventional university that professors are willing and able to devote that kind of time to a single student. It was amazing how students and faculty came together to become a high-performance unit in the eight weeks that each class took place," he adds.

Today, Alvarez is a respected, accomplished and results-oriented information technology executive with extensive international/domestic expertise in IT infrastructure, operations, security, telecommunications, regulatory compliance, disaster recovery, applications development, integrations and upgrades. He possesses a proven track record for reducing infrastructure costs by implementing corporate-wide improvements, and is known as an effective team leader who takes the initiative and discovers new ways to contribute to company growth.

Alvarez joined Brivea in January 2010 as executive vice president and chief operating officer. Brivea is a world-class provider of a cost-analysis process that measures and improves the financial effectiveness of IT in business.
